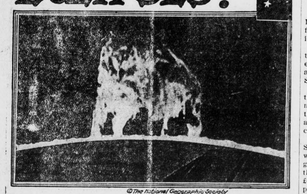
WHY STUDY ECLIPSES?



© The National Geographic Society

Flames Shooting Out From Surface of the Sun.

(Prepared by the National Geographic Society, Washington, D. C.)

ON THE ninth of May the sun and moon staged another of their great periodic dramas in which the Queen of the Night for a few minutes banished the King of the Day and ruled the sky.

No one in America or Europe could see this great show of the heavens, for the moon's shadow swept over only a narrow band extending from the middle of the Indian ocean to beyond the Phillipine Islands; and the pencil of darkness traced most of its line over water. But it crossed land in northern Sumatra, the southern tip of Siam and the northern Malay states; just touched southern Cambodia, and swept across the middle Phillippines. But so important was this brief blotting out of the sun to the scientists of the world that parties of them journeyed to these far off lands in the path of the shadow, taking with them elaborate instruments and cameras. Yet the total eclipse that brought about all this travel and expense lasted only five minutes in Sumatra, and less than four in the Phillippines.

It was not the darkness itself that interested the observers, but rather the haze of light that appeared around the circumference of the lightless moon, for that is the chromosphere of the sun and it holds many secrets. Also, they wanted to see the stars that shine immediately past the edge of the blotted-out sun, for their position may shed new light on the Einstein theory.

Meanwhile the man in the street will be wanting to know what is the use of such investigations anyway; and if the astronomer takes time to answer, it will be to say, "I don't know."

Nor could anyone foretell what new truths would be discovered, or foresee what new applications to human welfare they may have.

But new scientific knowledge always has a way of turning men's minds to its application to human necessities.

Today, in peace times, we see the great dirigible, the Los Angeles, flying through our skies without fear of the gas explosion which has wrecked so many superb lighter-than-air craft. And all largely because Lockyer, in 1868, training his spectroscope on the great flames that shoot out from the rim of the sun, detected a new line in their spectrum. He noticed its close resemblance to the lines of hydrogen and concluded it must be the spectroscopic signature of a light gas unknown to terrestrial chemists.

How Helium Was Found.

Twenty-eight years passed, with everybody thinking that this gas was a stranger to the earth. Then Sir William Ramsay obtained minute quantities of a new gas from uraninite. Imprisoned in a test tube and electrically excited, it began to glow. Studied with the spectroscope, it showed the same telltale autograph that Lockyer had observed.

More years passed. The World War was on, and America had entered it. The housewives of the plains of Kansas had been complaining of the quality of their natural gas. It didn't make enough heat or sufficient light. A middle-western university professor, H. P. Cady, was sent down to find out the trouble. In his spectroscope appeared once more the unmistakable signature that had come to Lockyer, Ramsay, and to Sir Ernest Rutherford in his manifold investigations of radioactivity. It told him why that gas wouldn't produce sufficient heat and light—it contained helium, as fuel as stone and playing the same role in the natural gas that slate plays in coal.

Then the American Chemical society met. The university professor was put on the program to tell of his discovery. He apologized for intruding a theme upon the attention of that great body which could not, by the longest stretch of his imagination, have any bearing on the momentous issue before which all other matters should stand silent. But after he spoke, a venerable British savant declared that he need offer no apology that if the war went on another two years the professor's contribution would do more to promote victory than all the other contributions to the proceedings.

Thus came helium as the stroke that would break the Hohenzollern lock. If all other weights should fail, it made possible the construction of giant dirigibles which could conduct raids over the enemy lines without fear of inflammable bullets.

And it was the training of a spectroscope on a huge flame on the rim of the sun during an eclipse that had first revealed this element.

Thrills in Astronomy.

Romance? Astronomy offers more thrills to the alert human mind than all the fiction in the Library of Congress could provide!

Recently millions of people listened in on the election speeches and returns, and marveled once more at the wonders of radio. But they little dreamed that a patient Danish astronomer had done the pioneer work which released Bell's telephone from the bondage of wires and made the ether of space its servant.

When Roemer found that eclipses of the moons of Jupiter occurred 16 minutes earlier when Jupiter and the earth were on the same side of the sun than when on opposite sides, he deduced that light was not instantaneous, but traveled at about 186,000 miles a second.

Clerk Maxwell concluded that light is travel at such a velocity, must be electro-magnetic, and that there must be other wave lengths than those which register on the human eye.

Hertz detected these hypothetical waves, Marconi harnessed them to sailing, and Pupin made them the burden bearers of sound. Vacuum tubes can now take the infinitesimal bit of energy these waves possess after spanning a continent—a bit of energy no greater than a fly fraction of that expended by a fly in crawling up a window pane—and, "stepping them up" and amplifying them, make them capable of producing a room-filling sound.

Here is an inkling of a solution of the problem of power sources after coal and oil supplies are gone. Perhaps Sirius, the gay Dog Star, and his less brilliant companion, astronomers have found indications that this satellite of the Dog Star has nearly as much mass as the sun, although it is only a little larger than the earth.

If that be true, then there are states of matter of which man never dreamed before. On that basis this dark star would be 50,000 times as heavy as the same bulk of water. In other words, a pint of the material composing that star would weigh 25 tons.

The world is looking for a good conductor of electricity that will enable industry to transmit power long distances without undue loss of energy. It is possible that this new understanding of the constitution of matter might lead to the open door of a new and better conductor to take the place of the diminishing supply of copper in the transmission of electrical power. Should such a conductor be found, then the melting snows of the Rockies and the Andes, of the Alps and the Himalayas, might turn the wheels of the world's industries, light the lamps of its homes, and produce all the fires of its kitchen ranges and sitting-room fireplaces.

The astronomer and the physicist have pooled their forces in cross-examining the atom. In the test tubes of the laboratory and the cosmic crucibles of the stars, they are attacking it with X-rays, spectroscopes, and other instruments of atomic torture, to make it surrender the secret it has withheld from humanity for so long.

When Madame Curie discovered radium and Rontgen produced the X-ray, they gave the world an inkling of the unheard-of powers that dwell within those infinitesimal solar systems; and with inconceivably small amounts of this power the physicist is bombarding the atoms to break them up, while the astronomer is studying the forces that affect them in the sun and the fixed stars.

The radium atom tells the physicist and the astronomer that atoms explode fast as molecules do, only with infinitely more power.

The fastest explosion that man has ever been able to produce has been at the rate of about 7,700 yards a second. The radium atom, in its disintegration, hurls its fragments at the rate of 12,000 miles a second, nearly 7,000 times as fast as the fastest known molecular explosion.

Will the physicist, with his supercharged electric furnace, and the astronomer, with his flaming stars, working hand in hand, and often, as a unit, be able to wrest the atom's secrets from it?

WANT TO BUY CASTLE? WELL, THEY'RE CHEAP

Foreign Agents Look to U. S. for Buyers.

London.—Want to buy a castle? England and Scotland have at least five historic ones for sale, not counting an island and an entire village.

There are probably many more than these five castles awaiting purchasers, and it is interesting that all the agents are looking toward the United States for high bidding buyers.

English noblemen are fast selling their unheated, expensive castles and moving into the city. Americans are the chief buyers, for only they can afford to put the estates into a livable condition.

There are no set prices for castles. Small ones in a fine state of ruin and well covered with dust but with no great historical incident attached to them can be picked up for as low as £4,000 (about $20,000) while better preserved and more historic specimens cost more.

Original Cost Small.

The original purchase price is a small item in owning a castle. If the purchaser is an American and wishes to live in it a few months of the year he must install central heat, bathrooms, sometimes electricity and an unending list of comforts. Even the walls must be propped up sometimes.

The most noteworthy of the castles now for sale include Tyntland castle, North Lancashire; Haggerston castle, Northumberland; Sibden castle, Shropshire; Skelmorlie castle, Renfrewshire, and Colliston castle, Forfarshire.

The first named castle overlooks the village of Tunstall and is said to be one of the ten remaining moated strongholds in England. Moats have a strong fascination for American buyers. This estate dates back to the Fifteenth century.

According to tradition Sir Brian Tunstall, the "stainless knight" of Scott's "Marmion," rode to his death on Flodden field from the carved gate of Thurland castle.

Island for Sale.

The other castles all date back to the Sixteenth and Seventeenth centuries, and the agents have some legendary story which enhances their romantic value.

Among other historic estates up for sale this summer is the island of Erbka, Argyllshire, and the village of Wotton, Staffordshire. A deer forest of 10,000 acres at North Morar, Inverness-shire, will also be sold.

High taxation and the expensive upkeep of historic estates is the reason assigned for the dumping of old castles and estates on the real estate market.

Adopting the American idea of country clubs, some of these estates are being turned into semipublic club houses. A number of old mansions are now in the process of renovation to become country clubs with "historical backgrounds."

Airplanes Spoil Mills Supply, Farmers Claim

Clarkson, N. Y.—Aviation hasn't improved the disposition or lacteal output of cows, farmers of this vicinity declared recently in demanding abandonment of the local airport.

It seems the zooming of planes over their grazing grounds, near the airport, brings bovine chagrin which reflects itself in the small quantity and poor quality of milk they give.

In registering their complaint before the town board, the farmers said that after a busy day at the aviation field, which was established a year ago by Dr. Pierre A. Bernard, they were "lucky if they get milk fit to drink" from their discomted kine. In addition, some said, the crowds that visit the air field every week trampled their vegetable gardens and fields and occasionally "snooped" about their barns and premises generally.

A justice of peace was appointed by the board to investigate the matter.

Siam Goes in Heavily for Weighing Machines

Washington.—Siam not only leads all Asiatic countries, but of all nations in the sixth largest importer of American built coin operated automatic vending machines, according to a recent survey of the National Geographic society. It is believed the machines are not used merely for decorative purposes but, rather, are performing services similar to those in America—weighing Siamese boxties and dispensing sweets to the crowds who frequent religious fairs, temples, and shrines.

Andorra's Tribute Fails to Pay Cost of Lunch

Perpignan, France.—The tiny republic of Andorra has paid her annual tribute in money to France in recognition of France's suzerainty. The Spanish share with the French a kind of joint guardianship over the tiny country which nestles high in the Pyrenees.

The money, about 1,500 francs, was brought to the prefect of the Pyrenees-Orientale, M. Bodenan, by three Andorran delegates. They handed over the tribute and then formally swore an oath of fidelity to France. A lunch which cost more than the tribute was then given to the delegates and other guests.

In Many Tongues

London.—The British and Foreign Bible society is this year issuing Bibles published in 618 languages.

Indians Play Bagpipes

A native bagpipe band was recently found in India by a traveling Scotchman. The band played at mess dinner, and when the visitor rendered "The Road to the Isles," a Scotch favorite, one of the natives repeated the tune, reading it from the music.

"In the Heart of Everything"

TIMES-VIRGINIAN

Established 1892

THURSDAY, JULY 11, 1929

Appomattox gets $931 and Buckingham $1147 for roads from the State Gas Tax for the month of June—get it on the roads quickly.

The census bill has been signed and next April girls will have to tell our ages.

A West Virginia paper says: Love your enemies, they only shoot you—your friends levy the taxes.

Tobacco Co-ops will have to organize again in order to be heard at the feast of farm relief.

Sign along highway in Virginia: Men working. One wonders whether it is a boast, an apology, an explanation, or just a bit of information.—Exchange.

The farm relief with $500,000,000 to be loaned to marketing associations is merely enough to pay the operators, and will not satisfy the farmers who have been living on promises for many decades.

It is expected that Dr. Pollard and Senator Mapp will engage in joint debate before the campaign is over. Better save the fire for Dr. Brown who will want to be heard after August 6th.

Dr. Pollard had a good day it is said at Buckingham court on Tuesday when he addressed a large crowd. Buckingham is a Mapp county. Appomattox, of course always goes with the organization and is put down for Pollard. All candidates for Democratic nomination are urging antis and regulars to go in the primary.

Attorney General Saunders renders another opinion on political statutes — electoral boards having the right to appoint judges without being required to give any party a majority of judges.—just so the two leading parties have recognition. So it happens that our judges appoint electoral boards, a majority of which are Democrats and said boards in turn appoint a majority of Democratic judges.

A live man pays 25 cents for a shave; a dead one pays $5. A wool overcoat costs $40; a wooden one, $500. Taxi for the theatre is $1.50; to the cemetery it is $5.50. A hired man plants corn for 40 cents per hour, but for planting you, he gets four times that much. For 50 cents you can fill your hide with home brew, but the embalmer gets $15. It's cheaper to live.—John W. Hall.

A great annoyance that the people of this town are not accustomed to is the mosquito pest. There is some local excuse for it and the attention of the board of health is respectfully directed to this unpleasant condition and an investigation of all cess pools and breeding places urged. One hyperdermick from an old mosquitor will keep a whole family awake all night. No mosquitos at Appomattox, if you please.

Our town council is being urged to take some action against the N. and W. Ry., for relief from the unnecessary blowing of whistles in the town. It has become a nuisance and disturbance of the peace and quietude of our town. The speed of trains could easily be regulated so that the crossings would be safe. Watchmen or safety appliances could be established at crossings. What we want is a prompt cessation of the nerve-wracking whistles in the town—it has become so acute that religious worship at our churches must suspend while the railraod carries on its disturbance.

Markers For Appomattox And Campbell

Historical markers have been ordered for a number of points of interest in the counties of Bedford, Campbell and Appomattox, Dr. H. J. Eckenrode, head of the history division of the state conservation and development commission, announced today.

Most of these proposed markers, he said, are on highway No. 10 in the vicinity of Lynchburg. The spot at which General Hunter camped on the night of his defeat by General Earley, and began his retreat westward, is to be indicated as well as the Peaks of the Otter head, by which General Hunter, in June 1864, advanced on Lynchburg.

Poplar Forest, once a home of Thomas Jefferson, will be marked as will the homes of the late John Goode and of Senator J. W. Daniel.

Other points of interest in this vicinity to be marked are Chestnut Hill, home of the founder of Lynchburg; Mount Athos; the old Quaker meeting house; Old St. Stephens church the old Concord furnace; Concord station, extreme limit of Hunters raid in 1864, and in Appomattox county, on highway No. 10, a marker will be placed in remembrance of the last fight engaged in by the army of northern Virginia, just a few hours before the surrender of General Lee. The commission also intends to put a marker at the McLean house where the terms of surrender were arranged.

Tom Johns To Head D. B. Ryland Co.

D. B. Ryland and Company, Lynchburg jewelers in business there for 41 years, will have as president and treasurer, Thomas W. Johns, of Burkeville, in which are many fine heifers raised from this animal.

Foremost of South Lawn, No. 90,578, whose sire was Langwater Foremost and dam was Catherine Agnes is now at the head of the heard on Mountain View Dairy, owned by Clement and Dorton and is one of the prettiest animals in this section of the State. He was bred by D. S. Dodson, of Burkeville.

84 Attend Family Reunion

The annual reunion of the family of Mr. and Mrs. J. L. Driskill was held Sunday, at Hundley Springs, Appomattox County, when eighty-four persons were present for the celebration. Some of the relatives were from Richmond and Petersburg. A short address was made by J. L. Driskill.

NOTICE !

The ninety-seventh session of the James River District Baptist Association will be held with the Liberty Chapel Baptist Church, on Thursday and Friday, 1st and 2nd days of August. Those coming by Rail will leave the C. and O. at Caskie and those over the N. and W. will leave at Appomattox. Those desiring to be met will write J. R. Reynolds, Vera, Va.

AUCTION SALE !

Valuable Town lots and Dwelling in the Town of Appomattox

Pursuant to decree of the Circuit Court of Appomattox County, entered at the June term, 1929, in the chancery cause of Joel H. Hubbard vs Annie H. King and others, the undersigned special commissioners will offer for sale at auction on the premises, at Appomattox, Va., at 11 a. m.,

Saturday, July 20th, 1929

the following described real estate:

Those certain lots located on Lee-Grant Avenue in the town of Appomattox, Va., adjoining Misses Lucy and Emma Smith, M. L. Earman et al, containing as a whole 2.07 acres, with the dwelling and other buildings situated thereon.

This property will first be sold in lots as subdivided and then as a whole, and the sale producing the highest price will be reported to court.

This sale offers a rare opportunity to secure valuable lots and a comfortable home in the growing town of Appomattox at auction prices.

TERMS: One-third cash, residue on a credit of one and two years' time, purchaser to execute bonds for deferred payments bearing interest from day of sale and title retained until purchase price is fully paid.

A. H. Clement,
B. B. Campbell, Special Comrs.

The bond required of Special Commissioners has been executed by Special Commissioner A. H. Clement before me with surety.

RECEIVERS' SALE

Pamplin Smoking Pipe and Manufacturing Company, machinery, stock of building material, finished and unfinished stock, clay pipes, two and one-eighth acres of land, with buildings and equipment thereon in the town of Pamplin, Va.

By virtue of authority vested in the undersigned commissioners and receivers by the Circuit Court of Appomattox County entered at the June term in the cause of H. W. McKinney, Admr. vs A. M. Wood and others we will offer for sale at public auction on the premises in the town of Pamplin, Va., at 11 a.m.

Saturday, July 27, 1929,

the following described real estate and personal property:

FIRST—All of that certain parcel of land, located in the town of Pamplin, Va., containing two and one-eighth (2-⅛) acres, as shown by survey mentioned in deed from The Akron Smoking Pipe Co., to C. F. Harvey and others, recorded in the clerk's office of the Circuit Court of Appomattox County.

Located on said lot is a saw mill shed, work shop, planing mill shed, boiler room and shaving vault, main factory building, packing room and shed, fire clay smoking pipe kiln, lumber kiln. These buildings are in fair condition and most of them are iron-clad.

SECOND—Personal property: 1 Blaidsell & Co., lathe and tools, 1 H. Bickford power drill and tools, 1 mud mill, 1 pipe-fitting equipment, 7 pipe moulds, 1 75 H. P. Ames steam engine, 90 H. P. Allen boiler, 1 4 H. P. Frick steam engine, 1 Geiser saw mill and Phenix Wood planer, 1 end trimmer, 1 resaw, 1 rip saw, 1 moulder machine, 1 three-side planer, 1 grinder and equipment, 1 line-shaft and drive belt, 1 iron safe, 1 stencil machine, 3 lumber trucks, 1 automobile truck.

This machinery is in first class condition and will be offered in parcels and then as a whole. This manufacturing company is making money and is a going concern and is working every day, and affords a wonderful opportunity for investors who desire to engage in the manufacturing business.

Upon application to any of the undersigned receivers or at the plant in Pamplin, Va., prospective purchasers will be shown over the property before day of sale.

TERMS: One-fourth cash, the balance in equal installments, payable one, two and three years, purchaser to execute bond bearing interest at six per cent per annum, waiving homestead exemption and with the right to anticipate any or all of the deferred payments and pay cash for the property. As to the personal property the purchaser will be required to pay one-half cash, the balance, six and twelve months' time. Bonds to bear 6% interest from date of sale and containing waiver of homestead exemption; and all of the property must be insured in a reasonable amount, and the policies filed with the undersigned receivers as a further security for the deferred payments. Taxes and insurance prorated as of date of sale.

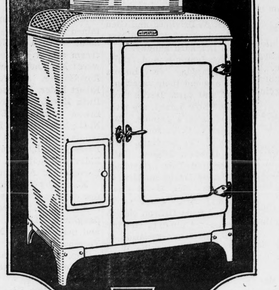
A. H. CLEMEET,
J. V. LEWIS,
B. B. CAMPBELL, Comrs. and Receivers.

Bond required of Commissioners and Receivers A. H. Clement and J. V. Lewis in the above cause has been executed before me with approved security.

C. W. SMITH, Clerk.

Continuous Refrigeration

2 cents a day
WITH
SUPERFEX
OIL BURNING
Refrigerator



THIS marvelous new Refrigerator brings to rural homes another "city convenience"--continuous self-generating refrigeration.

In the country home, where sources of food supplies usually are farther away, the need for effective refrigeration is greater than in the city. The Superfex supplies this need at a daily cost so low that it is saved many times over in avoiding food spoilage. And it saves thousands of steps.

From just a little more than a pint of kerosene daily--costing about 2 cents--the Superfex gives continuous refrigeration. Year-around service (12 months) for less than the cost of two months' supply of ice--and think of the convenience -- the health insurance -- the economy.
